

Physical Therapy Aide

The Physical Therapy Aide Profession

The purpose of physical therapy is to restore loco-motor function to the human body through alleviating and correcting movement dysfunction. Physical Therapy has become a valuable part of total patient care and rehabilitation. Physical Therapy Aides, under the direction and supervision of a physical therapist, assist with specific components of treatment interventions. A substantial increase in the amount of physical activity in the general population has resulted in a significant increase in the need for physical therapy services.

Physical Therapy Aide Program

The Physical Therapy Aide is generally responsible for carrying out the non-technical duties of physical therapy, such as preparing treatment areas, ordering devices and supplies, and transporting patients.

The Physical Therapy Aide may be employed in a variety of settings including:

- Hospitals
- Rehabilitation Centers
- Nursing Homes
- Home Care Agencies
- Outpatient Clinics
- Community Health Centers, and
- Sports Medicine Clinics.

As a result of the increase in physical activity among adult populations, the number of sports related injuries has increased substantially – escalating the need for physical therapy services and Physical Therapy Aides.

Education & Certification

This comprehensive 70-hour Physical Therapy Aide Program prepares students for the growing field of Physical Therapy. This program is intended to train students for entry level Physical Therapy Aide positions or to prepare students for more formal longer term program. *NOTE: The objectives of this class do not include a national or state certification, which generally requires at least 1 to 2 years of formal education.*

Educational Requirements: People interested in becoming a Physical Therapy Aide should have a high school diploma or GED equivalent.
